Projects

University

Auction Platform (Vue.js / TypeScript / Django) – Project December 2022

- Developed a web-based auction platform using Vue.js for the frontend, TypeScript, and Django for the backend.
- Implemented user authentication, real-time bidding, and auction management features.
- Ensured a smooth and responsive user experience through optimization and testing.

3rd Person Shooter Game (Unity / Blender / AI Navigation) - Group Project January 2023

- Collaborated with a team to design and develop a 3D third-person shooter game using Unity and C#.
- Created custom game assets in Blender, including characters, weapons, and environments.
- Integrated AI-based navigation system for enemy characters, enhancing gameplay experience.

Personal

Recipe App (React Native / JavaScript / Expo / Firebase) February 2023

- Built a cross-platform mobile application for users to discover, save, and share recipes.
- Utilized React Native, JavaScript, and Expo for efficient app development and deployment.
- Leveraged Firebase for user authentication, data storage, and real-time updates.

Experience

ONE TECH

Talent Incubator Program – London July 2021

- Participated in a 13-week personal and professional development program, gaining insights into the tech start-up industry and an introduction to project management through weekly webinars, assignments, and group sessions.
- Demonstrated initiative and organization, securing a place in the Talent Incubator and earning a special commendation for the outstanding quality of submitted assignments.
- Developed and coordinated a freelance business, including crafting a business proposal and implementing social media marketing strategies to attract a targeted customer base.
- Designed and created a responsive website to showcase the freelance business.
- Utilized various customer relationship management (CRM) software such as Trello, Brix24, Asana, and Gantt chart-based tools to optimize workload management.
- Cultivated an entrepreneurial mindset, adapting to setbacks and building resilience.

Computer & Laptop Repairs

COMPUTER TECHNICIAN VOLUNTEER –Basildon July 2018

- Assessed and accepted customer desktop and laptop systems for in-store repairs, gathering information on software and hardware issues and documenting all concerns.
- Troubleshoot systems and collaborated with customers to identify necessary software or hardware modifications.
- Disassembled systems, replaced malfunctioning hardware components, and installed new parts.
- Ensured system software and data integrity through comprehensive checks.
- Addressed and resolved select issues with smartphones and tablets.
